```javascript
// index.js

import { createStore } from 'redux'
import todoApp from './reducers'

// Create new store from reducer
const store = createStore(todoApp);

// Log the initial state
console.log(store.getState())

// Every time the state changes, log it
const unsubscribe = store.subscribe(() =>
  console.log(store.getState())
);

// Dispatch some actions
store.dispatch(addTodo('Learn about actions'))
// → [{ text: 'Learn about actions'}]
store.dispatch(addTodo('Learn about reducers'))
// → [{ text: 'Learn about actions' }, { text: 'Learn about reducers' }]

// Stop listening to state updates
unsubscribe();
```
